IN THE CLAIMS:

1. (Amended) An interactive electronic classroom system,  
comprising:

a1 a central computer [computing unit], including a central  
processor, a monitor, and associated peripheral hardware, for  
running individual classroom programs, including programs which  
accept sequences of input associated with student tasks to which  
students provide responses, said [peripheral hardware] central  
computer storing said programs and said responses[, said central  
processor] and providing analyses of said responses, under control  
of the teacher, via said programs for display on said monitor;
